### Risk and reward profile

- This indicator shows how much a fund has risen and fallen in the past, and therefore how much a fund's returns have varied. It is a measure of a fund's volatility. The higher a fund's past volatility the higher the number on the scale and the greater the risk that investors in that fund may have made losses as well as gains.
- The fund has been classed as 5 because its volatility has been measured as above average.
- This indicator is based on historical data and may not be a reliable indication of the future risk profile of this fund.

- The risk and reward profile shown is not guaranteed to remain the same and may shift over time. The lowest number on the scale does not mean that a fund is risk free.
- Counterparty risk: As the fund may enter into derivative agreements there is a risk that other parties may fail to meet their obligations. This may lead to delays in receiving amounts due to the fund, receiving less than is due or receiving nothing.
- Emerging Market Risk: Emerging markets tend to be more susceptible to large short term swings than more established markets. There is also a greater risk of being unable to buy or sell securities or that other parties may default and not meet their obligations, causing loss to the fund.
- Currency Risk: As the fund can be exposed to different currencies, changes in exchange rates may decrease the value of your investment.
- Concentration Risk: the fund may hold a small number of investments and may therefore be subject to larger than normal swings in its value.
- For more information about the fund's risks please see the Risk Factors section of the prospectus which is available at [www.waystone.com](http://www.waystone.com).
